Activity Report

Guest Lecture on "Guidance to Students on Patents & Copyrights"

Class: All branches

Date: 17th October 2020

Venue: Google meet

Conducted under: R & D Cell

Total Attendee: 65

Objective: A patent is a form of intellectual property that gives its owner the legal right to exclude others from making, using, or selling an invention for a limited period of years in exchange for publishing an enabling public disclosure of the invention.

Activity Report:

Following points were discussed by Dr Mukul and Dr. Pranjali:

A copyright is a collection of rights automatically vested to you once you have created an original work. To understand how these rights can be used or licensed, it is helpful to analogize them to a bundle of sticks, where each stick represents a separate right vested to you as the owner. These rights include the right to reproduce the work, to prepare derivative works, to distribute copies, to perform the work publicly, and to display the work publicly.

The primary goal of the patent law is to encourage innovation and commercialization of technological advances. Patent law incentivizes inventors to publicly disclose their inventions in exchange for certain exclusive rights. A patent protects inventions. These inventions can include new and useful processes, machines, manufactures, compositions of matter as well as improvements to these.
